GUANGDONG HONGYE FURNITURE MANUFACTURING CO., LTD.

China · Jiangmen

Leading Forestry Enterprises in Guangdong Province

Hongye Furniture Group is a furniture company with a history of more than 30 years. It was founded in Yongkang, Zhejiang, and developed in the Sino-Europe (Jiangmen) SME International Cooperation Zone - Heshan Core Area. With a registered capital of 230 million yuan, over 1,000 employees, and an annual tax payments exceeding 10 of millions, the company has built over 300,000 square meters of garden-style factory buildings and a supporting employee village.

The group's business covers more than 200 countries and regions. It currently mainly produces 6 series of furniture: 1. Office furniture series, 2. Hospitality furniture series, 3. Bank furniture series, 4. Medical healthcare furniture series, 5. Education furniture series, 6. Apartment furniture series.

In 2021, Hongye Furniture Group invested in the construction of the Laisu Hongyuan Cultural Tourism Project, actively contributing to the construction of the Greater Bay Area.

DEVELOPMENT HISTORY

-
-
- 2024 ● Honored as the only newly certified "Guangdong Forestry Leading Enterprise" in Jiangmen City.
The Lesuhongyuan Cultural Tourism Project was opened to the public.
- 2021-2023 ● Over 50,000 square meters of high-standard factory buildings in Yaogang were put into operation.
The "Super Five-Star" hotel furniture showroom was opened.
The high-end commercial furniture showroom was opened.
- 2019-2020 ● The six major series showrooms upgrades.
The "Juedu" integrated + office furniture brand was launched.
Signed a 600 million yuan agreement with Heshan Government for the Lesuhongyuan Cultural Tourism Project.
- 2015-2018 ● Won the "Famous Trademark of Guangdong Province" and "Guangdong Province Famous Brand Products".
Its "Jiangnan" office furniture brand officially launched.
Successfully acquired two old Taiwan-funded enterprises and transformed them into the hardware factory and soft furniture factory respectively.
- 2011-2014 ● Hongye's workshops for paint, panel, soft furniture, veneer, solid wood, hotel, and carton were put into production.
Hongye Employee Village and the office building were officially completed.
- 2010.3 ● Guangdong Hongye Furniture Manufacturing Co., Ltd. was officially established.
- 1983 ● Chairman Mr. Wang Hongjie started his business by processing/manufacturing furniture.

MAIN BUSINESS OF THE GROUP

Furniture Division

Hongye Group's furniture sector mainly focuses on commercial furniture and high-end customization. Among which commercial furniture includes three major brands and six series of products.

Hotel Division

Hongye Group has investments in 5 operational hotels, including Hongye · Ziling Hotel, Hongye · Zitian Hotel, Hongye · Taotao Hotel, Hongye · Youyi Hotel, and Hongye · Hongyuan Hotel.

Cultural Tourism Division

In 2021, Hongye Group and the Heshan government signed an agreement for the Lesuhongyuan Cultural Tourism Project. It opened to the public in 2024.

Ancient Architecture Division

Inheriting Chinese ancient architecture and promoting Chinese woodworking. Gathering experienced craftsmen and obtaining resources for ancient architecture.

THE MAIN HONORS THAT THE GROUP HAS RECEIVED IN RECENT YEARS

National high-tech enterprise

Leading forestry enterprises in guangdong province

Guangdong Province famous brand products

Famous trademark in guangdong province

Key trademark protection in guangdong province

Guangdong smart environmental engineering research center

Guangdong Province contract abiding and creditworthy enterprise

Chinese Industrial Innovative advanced enterprises

Specialized, focused, peculiar, and Innovative SMEs

For 14 consecutive years, a major taxpayer in Heshan city

AAA units for quality, service, and integrity

Unlocking Productivity

Acoustic and Privacy Factors in Open-Plan Offices

"Open-plan" has become the major trend in modern workplaces design. The concept of an open-plan office is based on the idea of creating a collaborative and flexible work environment. However, while this layout offers certain advantages, it also comes with its fair share of challenges, particularly in terms of acoustics and privacy.

The Major issue encountered in open-plan offices is the problem of noise. With multiple employees working in close proximity, noise levels can quickly escalate, leading to distractions and reduced productivity. Phone conversations, discussions between colleagues, and even the sound of typing can all contribute to a noisy and disruptive atmosphere. This constant background noise can make it difficult for employees to concentrate on their tasks and can be especially problematic for those who require a quiet environment to focus.

Another drawback of open-plan offices is the lack of privacy. In a space where there are no physical barriers between worksta-

tions, personal conversations and confidential meetings can become challenging. Employees may feel uncomfortable discussing sensitive matters or engaging in private phone calls due to the lack of privacy. This can lead to a sense of unease and hinder effective communication within the team.

To address the acoustic and privacy issues in open-plan offices, employers have several viable options. Installing sound-absorbing panels, partitions, or cubicles can effectively reduce noise levels and create designated zones for focused work. Another popular solution is the inclusion of acoustic booths, which provide employees with enclosed spaces for private conversations or concentrated tasks. These purpose-built booths are equipped with sound-absorbing materials to create a quiet environment amidst a bustling office. By offering these options, employers can cater to different work needs and create a more harmonious and productive workspace.

30mins

an active worker loses on average thirty minutes of work per day because of annoyance related to noise.

— JNA association

66%

office workers are 66% less productive in an open-plan office than when left on their own.

— Julian Treasure, The Sound Agency

23mins

It takes an average of 23 minutes and 15 seconds, to return to the original task after an interruption

— Gloria Mark, University of California, Irvine

48%

short-term memory recall decreases when employees are exposed to high noise levels compared to those in a quieter environment.

— Journal of Applied Psychology

The results of office sound environment survey

- Very much disturbed by noise
- Slightly disturbed
- Not at all disturbed

Influence of environmental requirements on concentration

- Noise
- Inadequate lighting
- Inadequate microclimate
- Residual concentration

Noise sources were found to be disturbing

- Conversations
- Office machines
- Telephones

Ratio of employees that report feeling often bothered by noise

- Unreported
- Reported

* Acoustic Satisfaction in Open-Plan Offices: Review and Recommendations by Maria Novati, Jennifer A. Valtch

* Acoustic Issues in Open Plan Offices: A Typological Analysis by Sara Dele Marchie, Simone Sacchi *GRCID and Gianfranco Cellai

Excessive noise in the office environment can have a detrimental impact on productivity, concentration, and overall well-being. Distractions from conversations, phone calls, equipment, and other sources of noise can disrupt concentration, making it difficult for employees to focus on their tasks. This not only leads to decreased productivity but also increases the likelihood of errors and mistakes. Prolonged exposure to high levels of noise can also cause stress, fatigue, and even physical health issues

such as headaches and elevated blood pressure. Additionally, noise pollution can affect communication and collaboration among team members, hindering effective teamwork and contributing to misunderstandings. Overall, the harmful effects of noise in the office underscore the importance of creating a quiet and conducive work environment for optimal performance and well-being.

Solo Working

Quiet and focused environment for an individual

Phone Calls & Video Conferences

Perfect setting for important phone calls or participating in virtual meetings

Group Meetings

Small group discussion could happen here without disturbing others

Private Conversations

Ideal for confidential discussions or one-on-one meetings

Reading & Meditation

Creating an ideal space for personal reflection or diving into a good book

Rapid Installation

The modular design allows an office to have a new room within several hours

Environment Control

Tailor your experience

We implanted a self-developed environment control system. With the dimmer panel, users have full control over the ventilation speed, light strength, and light temperature, allowing them to create a personalized and ideal working environment that promotes productivity and well-being.

The ability to adjust the ventilation speed ensures that users can maintain a comfortable airflow within the booth, preventing stuffiness or discomfort. Whether you prefer a gentle breeze or a more powerful air circulation, the choice is yours. This feature not only contributes to a pleasant atmosphere but also helps in maintaining focus and alertness throughout the workday.

The adjustable light strength and temperature further enhance the customization options available to users. Adequate lighting is crucial for reducing eye strain and promoting concentration. With the ability to control the light intensity, users can create the perfect balance between brightness and ambiance that suits their specific tasks and preferences. Additionally, being able to adjust the light tem-

perature allows users to set the mood according to their needs, whether it's a warm and cozy atmosphere or a cooler, more invigorating environment.

Incorporating an infrared (IR) sensor into the booth design adds convenience and energy efficiency. As soon as a user steps into the booth, the IR sensor detects their presence and automatically activates the ventilation system and lighting, eliminating the need for manual adjustment. This seamless experience ensures that users can quickly settle into their workspace without any interruptions or delays. When the user leaves the booth, the IR sensor is smart enough to detect their absence and automatically shuts off the lighting and reduces ventilation to conserve energy within certain time.

Users can also switch to manual mode through the power button to keep the lights and ventilation on and off for longer. These energy-saving features not only contribute to a more sustainable workplace but also saves costs on electricity bills.

Air ventilation

Feel just like in the office

01

Balanced air pressure

Most insulated booth products vent air by positive air pressure which leads to ear discomfort. In ZUM, fans are used for both air intaking and outtaking to keep the air pressure same from the outside, that keeps users away from the 'Airplane ear' (ear barotrauma).

02

Centrifugal fan

The fan noise becomes apparent when it is quiet in the booth. We use centrifugal fans for air intaking to achieve smoother airflow at lower speeds, creating less noise.

03

Automatic refresh

Every 30 mins, the fan will start to ventilate the air automatically for 5 mins, which keeps the duct and booth dry, smelling fresh, and ready for the following user.

04

Acoustic air duct

Inspired by the acoustic plenum, we applied sound-absorbing material in the duct to attenuate sound exchange between inside and outside maximally.

Lighting

Essential Eye-caring

With the OSRAM LED module and glare-reducing prismatic lenses, the light delivers a CRI (color rendering index) of 92, ensuring true-to-life colors that enhance visual accuracy in booth spaces.

The flicker-free emitting feature minimizes eye fatigue during extended work hours and provides a comfortable and soothing lighting experience, promoting focus and keeping eye health.

Details

More than just acoustic

Magnetic door lock

Lever handle lock with magnetic deadbolt.

Stainless steel door thread

Stainless steel made that you could customize your label on.

Concealed door closer

Concealed cam-action door closer.

15W wireless charger

Optional 15W wireless charger embedded into table top.

Modular power outlet

With USB type A/C, Optional multitype socket and keystone module available.

Compact laminate table

Compact laminate, scratch and chemical resistant, optional MDF board available.

We understand that a well-designed booth not only attracts attention but also encourages engagement and interaction, so we place great importance on creating booth products that not only catch the eye but also provide an exceptional user experience. With meticulous attention to

detail, we carefully designed every aspect of our booths to ensure optimal usability. Our goal is to create a seamless and enjoyable experience for all users, allowing them to effortlessly enjoy this acoustic sanctuary.

Speech Level Reduction(D_{SA}) >29dB

In ISO 23351-1:2020

01

Firmly sealed

Dual sealing strap on door frame and glass edge ensures a tight seal and minimizes sound leakage.

02

Low-frequency blocked

Dampening material is used between feet and floor to reduce the structure-borne Low-frequency transmission.

03

Composition of wall

The side wall of our acoustic booth consists of multiple layers of acoustic material, specifically designed to effectively block and absorb sound.

04

Reinforced transparency

Laminate glass is used for better sound proofing while keeping the transparency.

Easy to assemble, move and extend

Born for the changing office need

Within merely one hour, a new booth will appear in your office with the work of minimal 2 people. The modular design enables a swift installation process. This efficient setup requires no trimming, bolt-

ing, or gluing, no waste generated during installation process, all packaging materials can be recycled, allowing immediate use.

Build

in by

Optional castor wheels, making it easy to move and reposition as needed. This mobility ensures that you can adapt the booth's location according to your changing requirements or room configurations.

Additionally, ZUM can easily be extended to a larger size to cater to various client requirements. 2 or more booths could be combined into a bigger one for temporary use by using special connect parts, like

hosting large-scale events. You could also order new body parts to change permanently. Regardless of the challenges, ZUM can always swiftly adapt to meet new tasks with optimal performance.

Remove the back frame and glass of the booth

01

Connect the booth with the extensional parts by connect frame

02

Put the back frame and glass back.

03

Finished

04

“ From petite to grand,
ZUM is on your demand ”

Model specification

We understand that every workspace is unique, so we offer an extensive selection of models available in various sizes, to cope a wide range of requirements. At the same time, we offer customization service to tailor our booths

precisely to your needs. Whether you need individual booths for focused work or collaborative spaces for team discussions, we have the perfect solution for you.

Model S

Your Personal Oasis in the Office!

Model S, a versatile and compact work-space solution that is perfect for solo working, phone calls, and meditation. With its dimensions of 1m², this booth can be

easily placed anywhere in the office, providing a private and quiet space for focused work or confidential conversations.

Acoustic information

What is ISO 23351-1:2020 ?

ISO 23351-1:2020 is a recently introduced standard that assesses the extent to which phone booths, work pods, and other furniture combinations reduce speech levels. Through a designated test, it calculates a metric known as "speech level reduction," represented as D_{sA} (decibels/dB). This standard marks the first of its kind specifically dedicated to booths and similar partially enclosed furniture units. Based on the degree of speech level reduction they offer, office pods are categorized into classes A+, A, B, C, or D. Office pods in classes A+, A, and B ensure the highest level of speech privacy.

How to reduce sound propagation ?

- Utilize high-density soundproofing materials, such as metal, concrete and glass, on primary surfaces to effectively attenuate the transmission of sound waves.
- Optimize gap sealing through the application of waterproof adhesive, sealing strips, or other appropriate sealing materials to ensure minimal noise leakage.
- In areas where achieving complete insulation is impracticable, like ventilation ducts, maximize the distance for sound travelling and apply sound-absorbing materials along the path, such as PET acoustic felt, to dissipate sound energy.

What is STC and NIC?

STC (Sound Transmission Class) is a way to measure how well a material can block sound. It's often used to test partitions, like walls and screens. The higher the STC number, the better the partition is at stopping sound. STC is important for evaluating partitions that separate areas where people talk.

NIC (Noise Isolation Class) measures how well two rooms are insulated from sound after construction. Higher NIC values mean better sound insulation between rooms.

STC and NIC are similar, but they also have differences. NIC is a field measurement, which means it's taken in the actual space, while STC is a laboratory measurement. Since STC is not done in the actual space, it doesn't consider factors like sound absorption in the room receiving the sound. This makes NIC more comprehensive for evaluating sound insulation in both rooms, not just the partition between them. Both measurements can be helpful for checking sound insulation.

What is Speech intelligibility ?

Speech intelligibility refers to the ability of a listener to understand and comprehend spoken words or messages. It measures how clear and easily understandable speech is in various contexts, such as public address systems, telecommunications, broadcast media, or live performances. Factors that affect speech intelligibility include pronunciation, articulation, volume, background noise, and the quality of the audio transmission system. High speech intelligibility is desirable to ensure effective communication and minimize misunderstandings.

What is Centrifugal fan ?

Different from axial fan which is commonly encountered, centrifugal fan is normally constructed as a fixed drum shape with a number of impellers. Centrifugal fans move air radially. The airflow created passes through a system of tubes or ducts which creates a higher pressure airflow, making them ideal for aspirating, cooling, ventilating and conveying air.

What is PET acoustic felt ?

PET acoustic felt is a material made of polyethylene terephthalate (PET) fibers, which are commonly used in the production of textiles and fibers. It is a type of sound-absorbing material that is commonly used in various acoustic applications, such as in the construction of soundproof rooms, studios, and other spaces where noise control is important.

PET acoustic felt is typically made by compressing and heating PET fibers together to form a dense, porous material. The pores in the material help to absorb and dissipate sound waves, thereby reducing the amount of noise that passes through the material. The felt-like texture of the material also helps to scatter and diffuse sound waves, further enhancing its sound-absorbing properties.

What is Laminate glass?

Laminate glass, also known as safety glass, is widely used for soundproofing purposes due to its unique construction. Comprised of multiple layers of glass bonded together with a polyvinyl butyral (PVB) interlayer, laminate glass effectively reduces noise transmission by absorbing and dissipating sound waves. This design minimizes the transfer of external noise into the interior environment, creating a quieter and more peaceful atmosphere. Additionally, laminate glass offers enhanced security, protection against UV rays, and is commonly utilized in windows, doors, and partitions to achieve better soundproofing in areas exposed to high levels of noise.
